

## Limb Length Difference (LLD)

## Investigation:

- History-especially hip dysplasia, total hip replacement and fracture
- Examination and assessment.

## Management (including conditionspecific self-care options):

Consider over the counter heel raise for short side.

Refer to Integrated MSK Service (Extended Scope Practitioner) if:

- LLD suspected
- Note: It is difficult to accommodate large LLDs with in-shoe devices. For these cases patients will need a surgical appliance.
